Context

Title 15 U.S. Code § 631
& § 633 – SBA and
Government-Wide
Procurement Preference
Goaling Program

DoD's Defense Innovation
Unit Experimental (DIUx)

Section 809 Panel

Title 15 U.S. Code § 657a
– HUBZone Program

Research Questions

1. What are the survival rates for new entrants in the market for federal contracts?
2. How do these survival rates compare with the survival rates for new entrants in the defense industrial base specifically?
3. How do these survival rates change between small and medium or large businesses?
4. What firm-level characteristics differentiate small from medium or large businesses?

Previous Focus on Small-Business Survival

New-firm Survival depends on characteristics that fall into three buckets:

Firm-Level Characteristics:

- Size
- Firm Age
- Firm Ownership and Demographics
- Firm Nationality

Industry-Level Characteristics:

- Degree of Competition
- Innovation Rate
- Industry Growth Rate
- Capital Intensity

Macroeconomic-Level Characteristics:

- Business Cycle
- Unemployment Rate
- Inflation Rate

Data and Specification

1. Data Sources:

- 2.- Federal Procurement Data System (FPDS)
- 3.- System for Award Management (SAM)

•Key Variable Definition:

- Market entry defined using the registration date in SAM
- Market exit defined using the last signed date within the 10-year study period in FPDS
- Small vs. Non-Small new entrants

•Sample:

- Six analytical samples of new entrants in the market for both government-wide and DoD-specific contracts
- Each sample includes all new entrants starting in year t where $t = 2001-2006$
- Each sample is tracked over the decade following t

•Survival Rates

- i -year survival rates where i equals 3, 5, and 10 for each of the six samples of new entrants
- The survival rate is equal to the number of firms that survived i years divided by the total number of firms that entered in the baseline year

Results: New Entrants in the Market for All Federal Contracts

Number of New Entrants Per Year (2001-2016) - All Federal Agencies

Results: New Entrants in the Market for DoD Contracts

Number of New Entrants Per Year (2001-2016) - DOD

Results: Survival Rates 2001 Sample

2001 New Entrants' Survival Rates							
All Federal Agencies				DoD			
Observations:	All New Entrants	Small New Entrants	Medium or large New Entrants	Observations:	All New Entrants	Small New Entrants	Medium or large New Entrants
2237				1846			
3-Year	78.01%	76.09%	80.72%	3-Year	71.56%	69.81%	74.05%
5-Year	62.27%	61.31%	63.60%	5-Year	55.47%	55.31%	55.70%
10-Year	19.58%	20.49%	19.16%	10-Year	13.98%	15.14%	12.32%
Graduation Rate		3.53%		Graduation Rate		2.38%

5-Year	42.52%	50.00%	34.85%	5-Year	38.95%	46.99%	30.09%
10-Year	6.52%	8.67%	4.33%	10-Year	5.89%	7.63%	3.98%
Graduation Rate		0.56%		Graduation Rate		0.42%	

Source: FPDS and SAM

Notable Conclusions

1. Survival rates are higher for small businesses compared to their large/medium sized competitors
2. There is a severe decline in the number of new entrants entering the market each year from 2001-2016
3. Low graduation rates as indicator of perverse incentives

Limitations

1. Survival and graduation rates paint a purely descriptive picture
2. Data reporting barriers

Next Steps: Missing Data Reconciliation

How the two data sources should align

Future Considerations

1. Strengthening the statistical capacity of the calculations
2. Investigating the distribution of dollar obligations that go to surviving firms, exiting firms, and graduating firms
3. Parent company split-offs for defining individual businesses
4. Calculating the survival rates of all existing firms
