

Acquisition Research Program:  
Creating Synergy for Informed Change

# Ontology-based Software Reuse Repository

Jean Johnson

Lecturer, Naval Postgraduate School

# Topics

- Background
- Research Goals
- Repository Tool
  - Guided Search
  - Repository Framework
  - Visualization
- Use Case Demonstration

# Background

- Need for improvements
  - Software repository capabilities often sighted as inhibitor to software reuse
  - Robust search and discovery methods needed
- SHARE Repository
  - Enables reuse of combat systems software and related assets
  - Est. August 2006 by PEO IWS
  - NPS researchers tasked to consider areas of improvement for the repository

# Research Goal

- Improved software repository capabilities
- Areas of improvement:
  - Organization of repository contents
    - Robust metadata
    - Include all relevant artifact types
    - Ontologies to capture context for repository contents
  - Search and discovery methods
    - Guided search
    - Multiple Views

# Guided Search

- Smart navigation of repository contents vs. typical search and return
- Point and click interface
- User context incorporated into search process
- Results are continuously reprioritized based on user actions

# Repository Framework

- Component Specification - a description or model of the items in the repository
  - “Typical” Metadata - information about an asset/artifact
  - Software Behavior Description – a searchable representation of the software asset’s behavior
- Ontology – a contextual model of the repository items describing their relationships to aid in associating artifacts with user needs

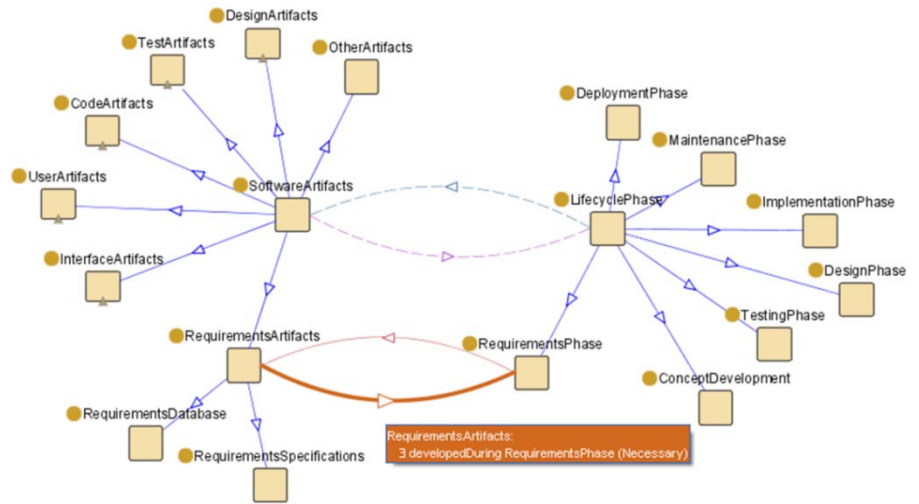

# Repository Framework - Ontologies

- Multiple sources of context for repository artifacts
  - Artifact's place in the Software Engineering Lifecycle
  - System Architectures (Aegis, SSDS, etc.)
  - Surface Navy Open Architecture reference architecture
- OWL-DL (Description logic) representations included in previous reports

# Lifecycle-Artifact Ontology

- Links artifact types to development activities

- ▼ LifecyclePhases
  - ConceptDevelopmentActivity
  - DeploymentActivity
  - DesignActivity
  - ImplementationActivity
  - MaintenanceActivity
  - RequirementsActivity
  - TestingActivity

- ▼ SoftwareArtifacts
  - ▶ ArchitectureArtifacts
  - ▼ CodeArtifacts
    - CompiledLibrary
    - ExecutableProgram
    - SourceCode
  - ▶ DesignArtifacts
  - ▶ InterfaceArtifacts
  - ▶ OtherArtifacts
  - ▶ RequirementsArtifacts
  - ▶ SimulationArtifacts
  - ▶ TestArtifacts
  - ▶ UserArtifacts

Lifecycle-Artifacts  
 Relationships

PROPERTY BROWSER

For Project: Artifacts

Object Datatype Annotation All

Object properties

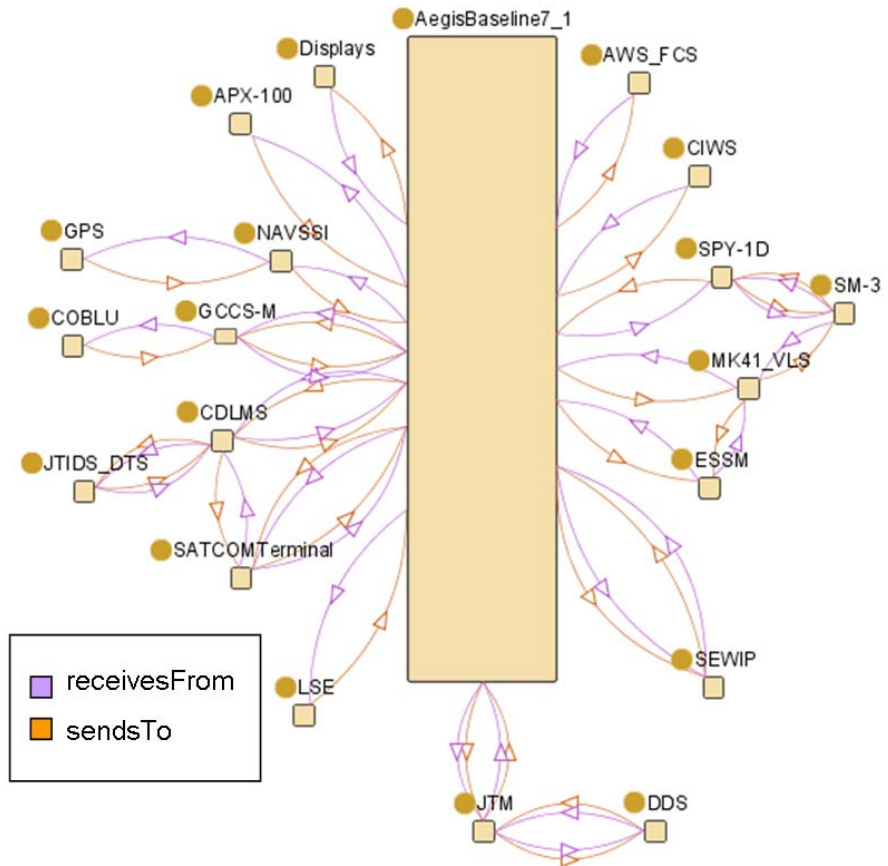

- oftenDevelopedDuring ↔ mayProduceArtifact
- oftenUsedDuring ↔ mayRequireUseOf
- mayProduceArtifact ↔ oftenDevelopedDuring
- mayRequireUseOf ↔ oftenUsedDuring

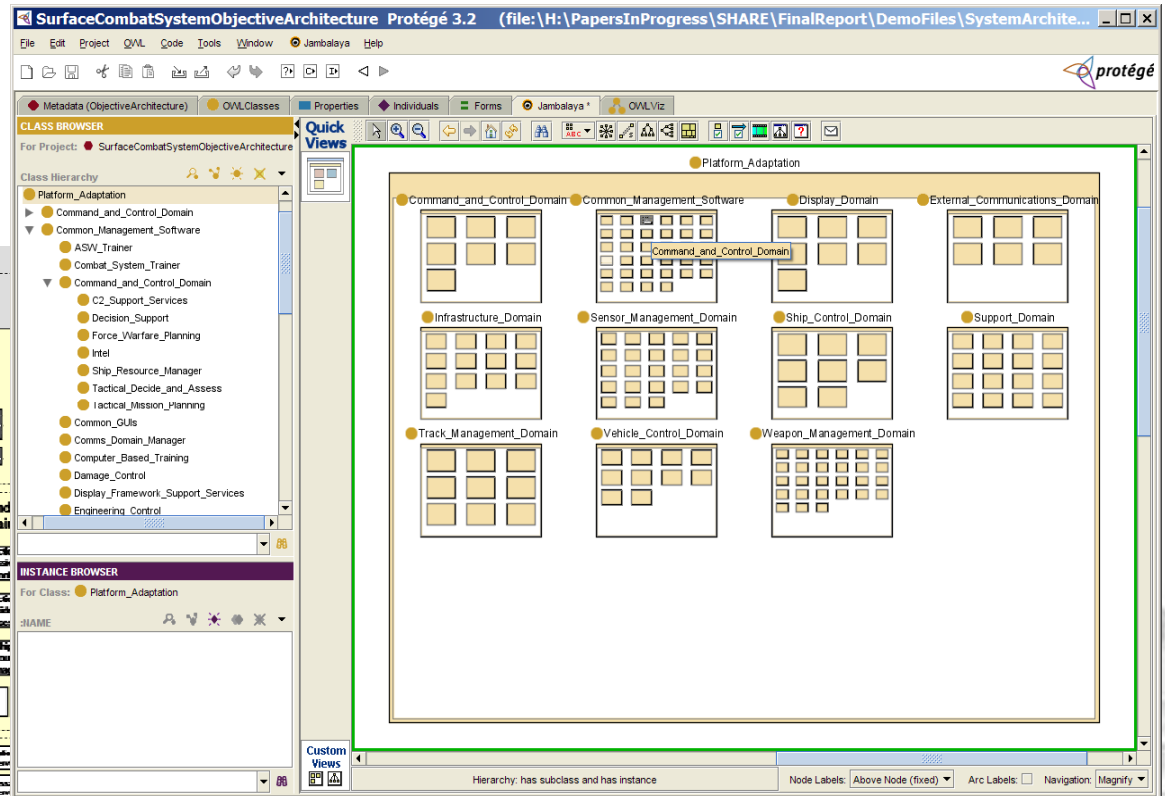

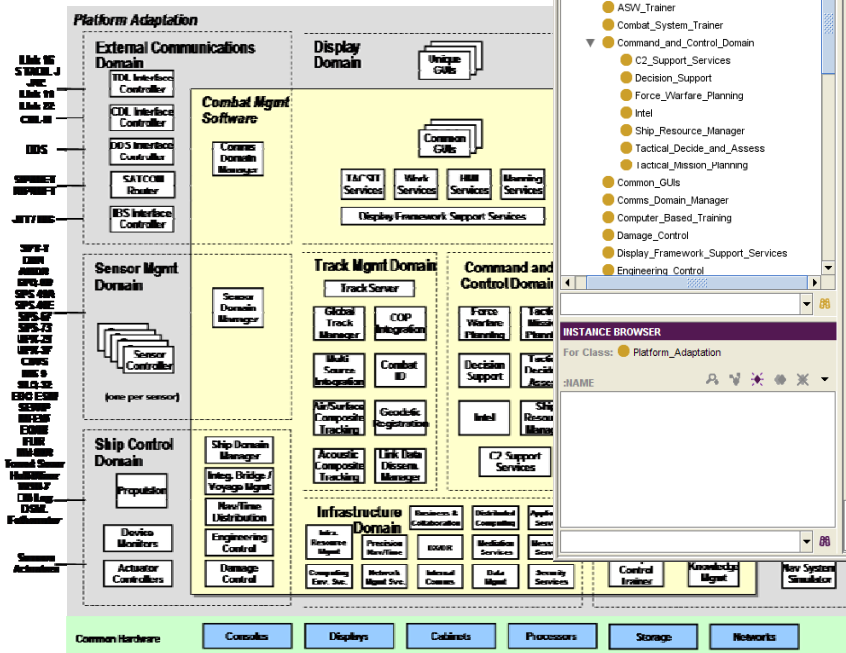

# System Architecture

- Captures
  - System-subsystem relationships
  - Interfaces
  - Any other desired architectural relationships
- Example from Aegis SV-1 available in RDA CHENG Naval Architecture Repository System (NARS)

# Surface Combat System Top Level Objective Architecture

Converted architecture view to OWL

# Visualization

- Multiple visualization tools allow users to explore contents in a comfortable setting.
- Different types of views suggested:
  - Fisheye Graph (Use Case shows)
  - DoDAF Views
  - UML Representations

# Use Case Demonstration

# Overall Description

- Replacement for a subsystem of Aegis, generically termed “Submodule B”.
- SHARE repository consulted to find artifacts that will help in the development of the new subsystem ***requirements.***
- Potentially, there are existing system requirements that can be reused.
- There may also be additional artifacts to be discovered that may be helpful.

# Artifact Detail Page

**Name:** Requirements Spec XYZ for Aegis Submodule B  
**Version: ##** **Date of Creation:** Date  
**Description:** This requirements specification documents the functional and non-functional requirements for Aegis Submodule B  
**Artifact Type:** Requirements Artifacts: Requirements Specification

Retrievals	Rating	History	Blogs	Retrieve
75	★★★★★	<a href="#">Past Uses</a>		<a href="#">Add to list</a>

**Contribution Rationale:** Submitter rationale for why it is included in the repository (free text)

**Applicable Systems:** Aegis: Submodule B

**Objective Architecture Tags:** Command and Control: Global Track Manager

**Software Behavior Description:** CSFL Function 1, CSFL Function 2

**History:**

Development Status: Complete

Pedigree:

Newer Version Of: Aegis Submodule B version XX

**Interdependencies:**

Interfaces With: Aegis Submodule A, Aegis Submodule C

**Users who retrieved this item also retrieved:**

Requirements Spec XYZ for Aegis Submodule B and Requirements Spec ABC for LCS Submodule Q are created during the requirements activity

Requirements Spec XYZ for Aegis Submodule B and Requirements Spec ABC for LCS Submodule Q are both members of the domain Command and Control: Global Track Manager

Requirements Spec XYZ for Aegis Submodule B and Requirements Spec ABC for LCS Submodule Q have common functionality CSFL Function 1 and CSFL Function 2

# Summary

- Ontology-based approach for organizing a software reuse repository
- Computer aided navigation techniques are enabled based on relationships in ontologies
- Demonstrated by Use Case scenario
